

The AI Operating System for SaaS Finance Teams

This is modern finance

CURRENT STATE

Finance becomes the integration layer

Every month, finance spends weeks reconciling systems and data that were never meant to work with each other

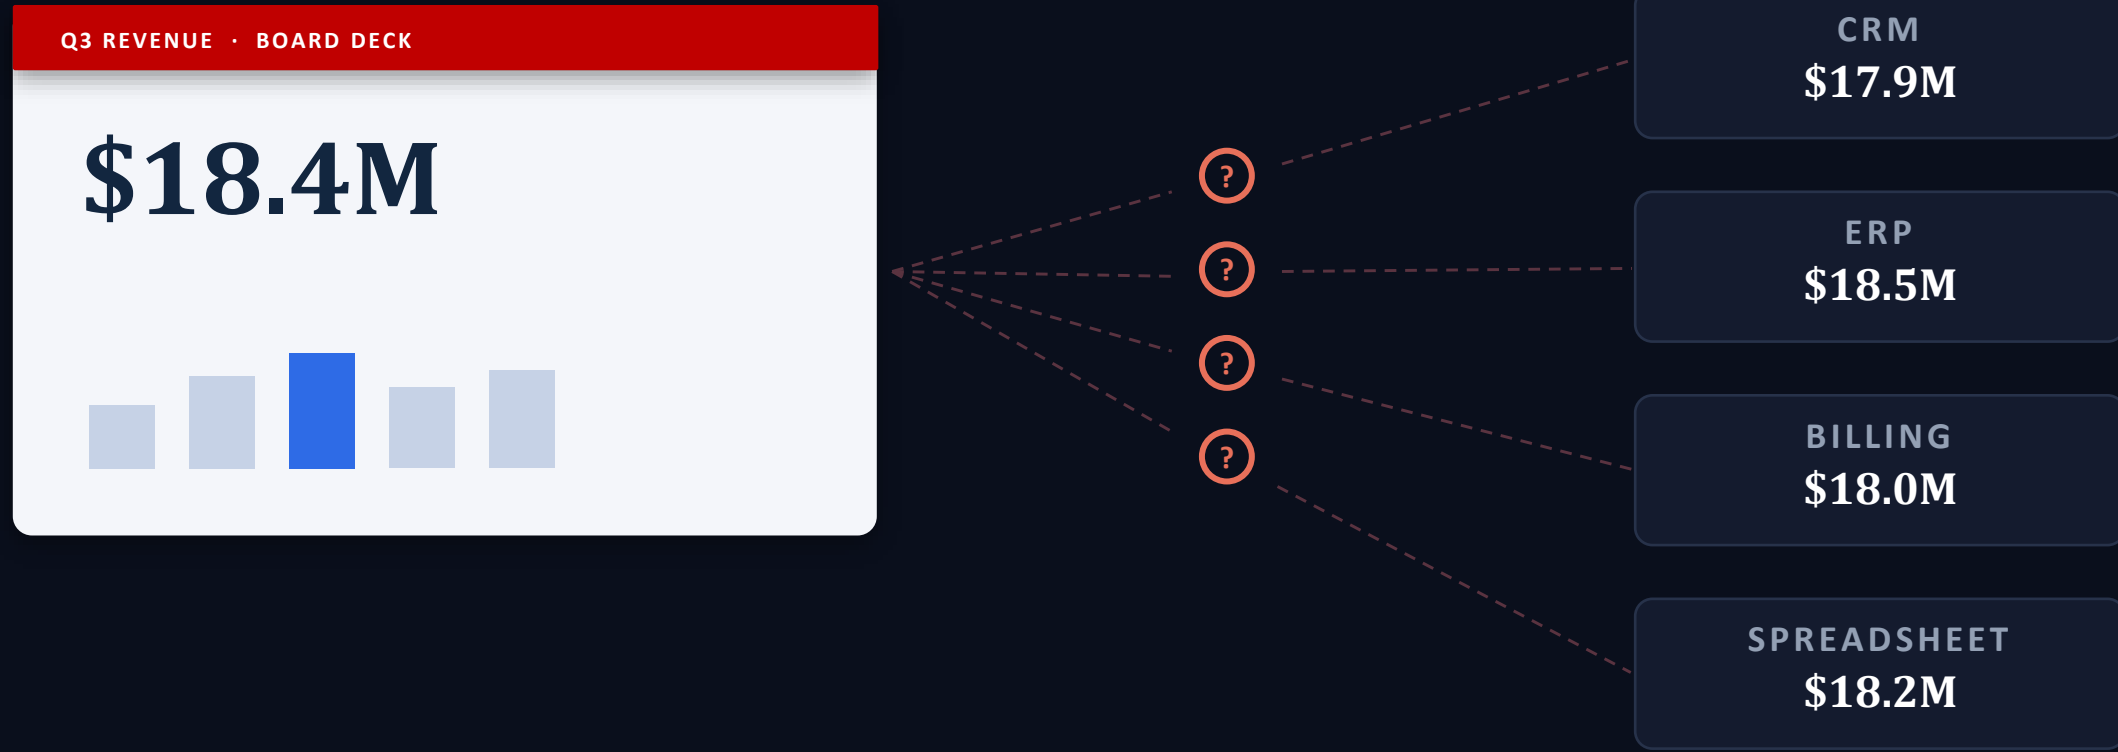

The result?

THE RESULT

Each question. Five answers.

Trust erodes. Reporting is stale. Systems don't reconcile. Decisions happen too late.

What if you could turn:

Weeks into minutes?

Confusion into trust?

Results into answers?

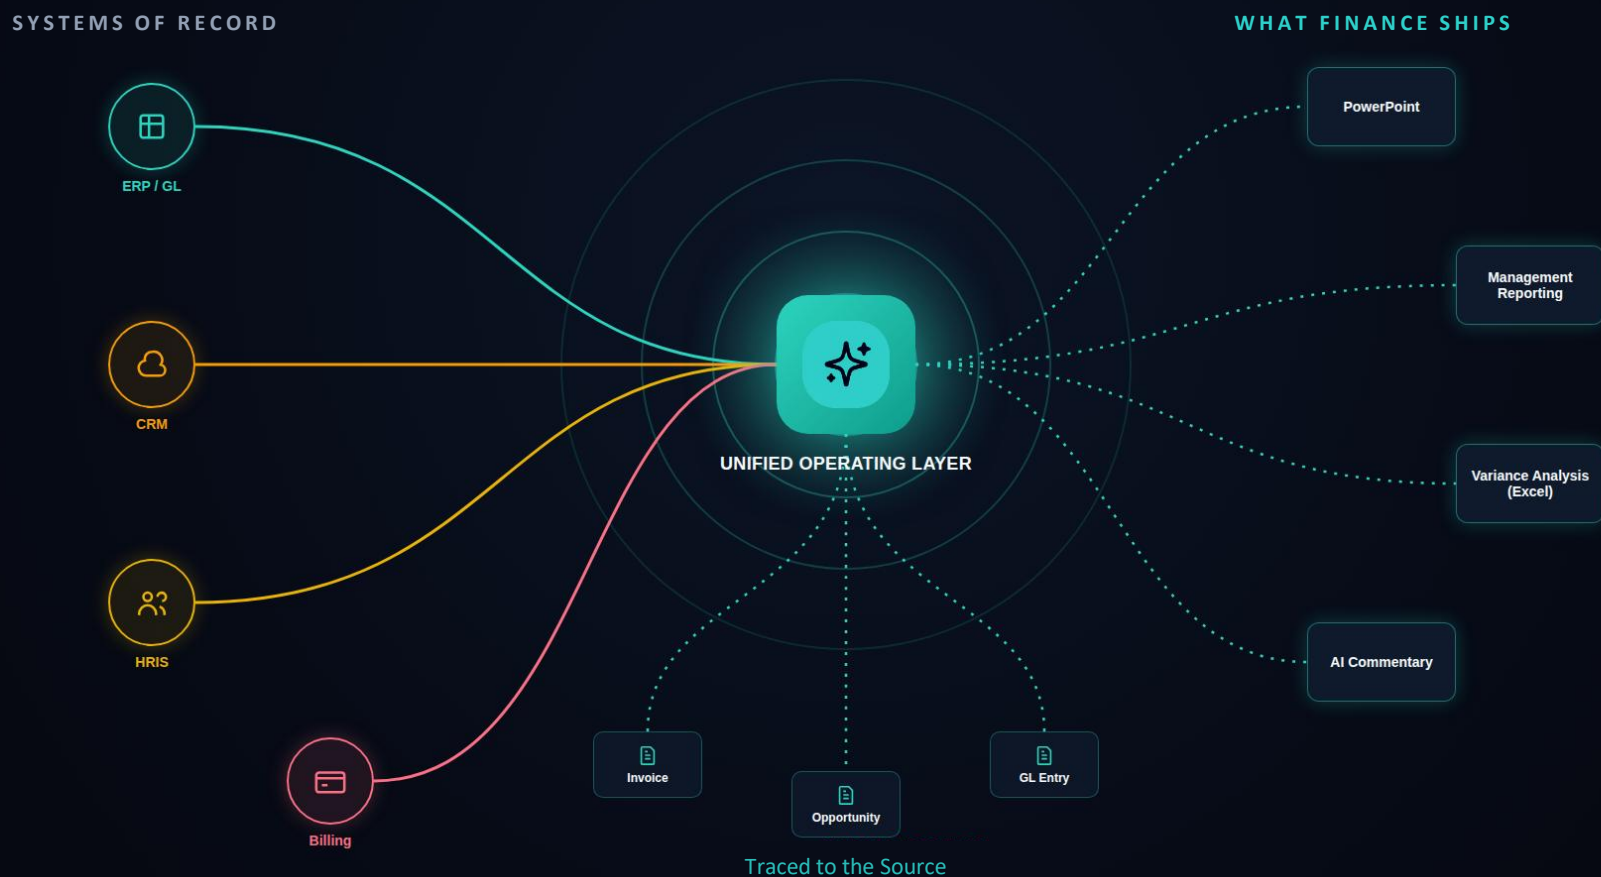

Meet:

WHAT WE ARE

One governed layer between the systems and the decisions.

SMPL.ai unifies, standardizes and reconciles the data, applies deterministic finance logic, while AI explains the results and the risks ahead

“How can we trust SMPL.ai?”

WHY SMPL.ai CAN BE TRUSTED

AI sits on top of financial truth. It does not create it.

Deterministic logic produces the number. AI explains it. Every figure and every explanation carries a path back to its source.

AI LAYER

analyze · explain · surface

FINANCE LOGIC

deterministic calcs · SaaS metrics

DATA MODEL & GOVERNANCE

standardize · validate · reconcile

BUSINESS SYSTEMS

ERP · CRM · billing · HRIS

“But we’ve already implemented AI”

WHY NOW

Finance bought AI faster than it got value from it.

Of the 63% of finance groups that adopted AI, only 21% are realizing any value from it.¹ Great adoption, poor execution.

63%

actively using AI

the gap

— — — — —

21%

Those that see measurable value

An assistant on top of unreconciled data cannot produce usable outputs. The missing piece is the governed layer underneath.

¹Source: Deloitte, Finance Trends 2026. Deloitte establishes the adoption and value gap; the explanation above is SMPL.ai's own thesis.

“What does the competitive environment look like?”

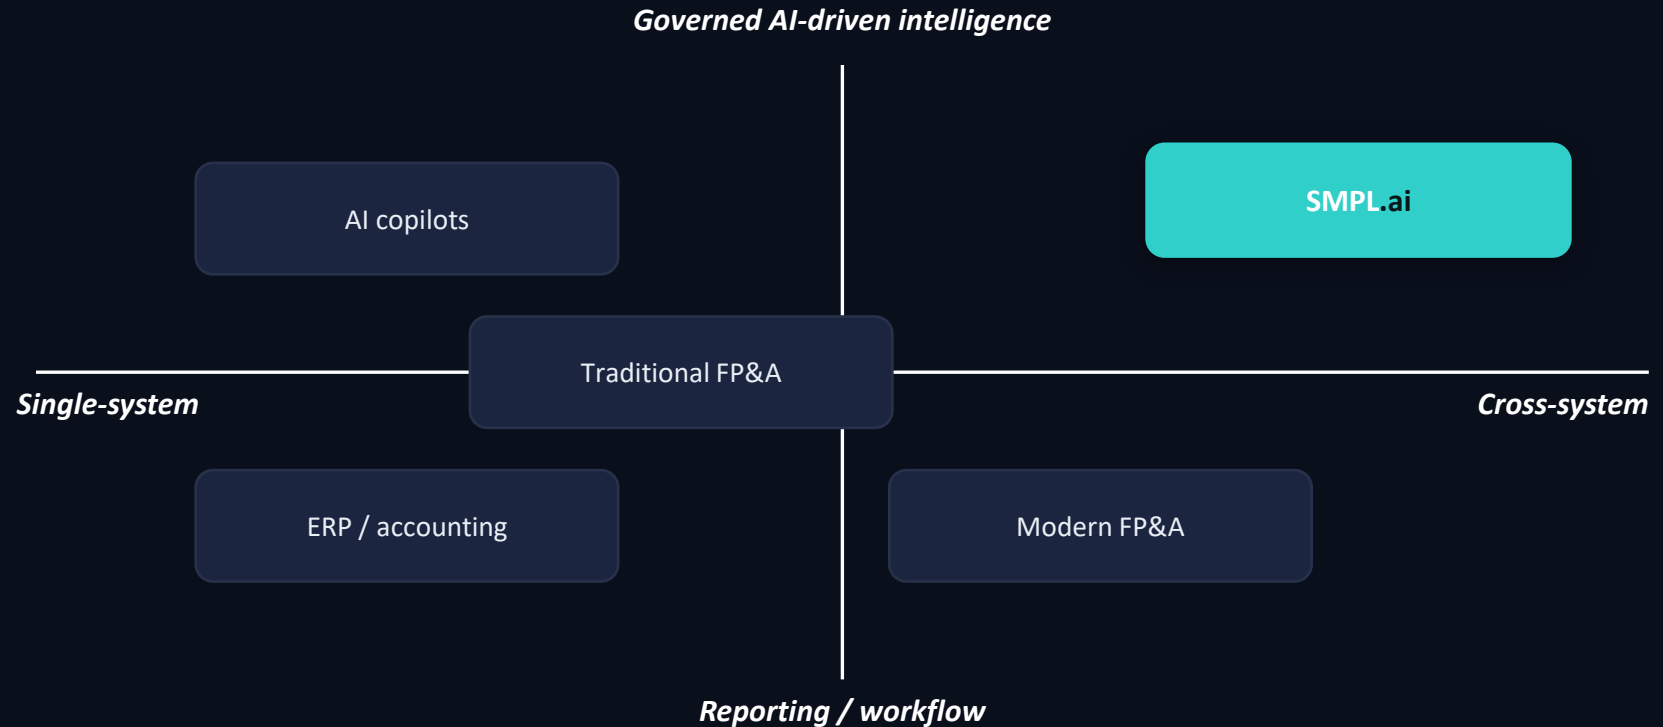

MARKET LANDSCAPE

Everyone owns a piece. Nobody owns the layer between them.

Traditional finance tools operate within a system or workflow. SMPL.ai works across them, combining governed financial context with AI-driven intelligence.

Category examples

- Modern FP&A:
 - Cube
 - Datarails
 - Abacus
 - Pigment
 - Planful
 - Adaptive
- ERP / accounting layer
- Standalone AI copilots

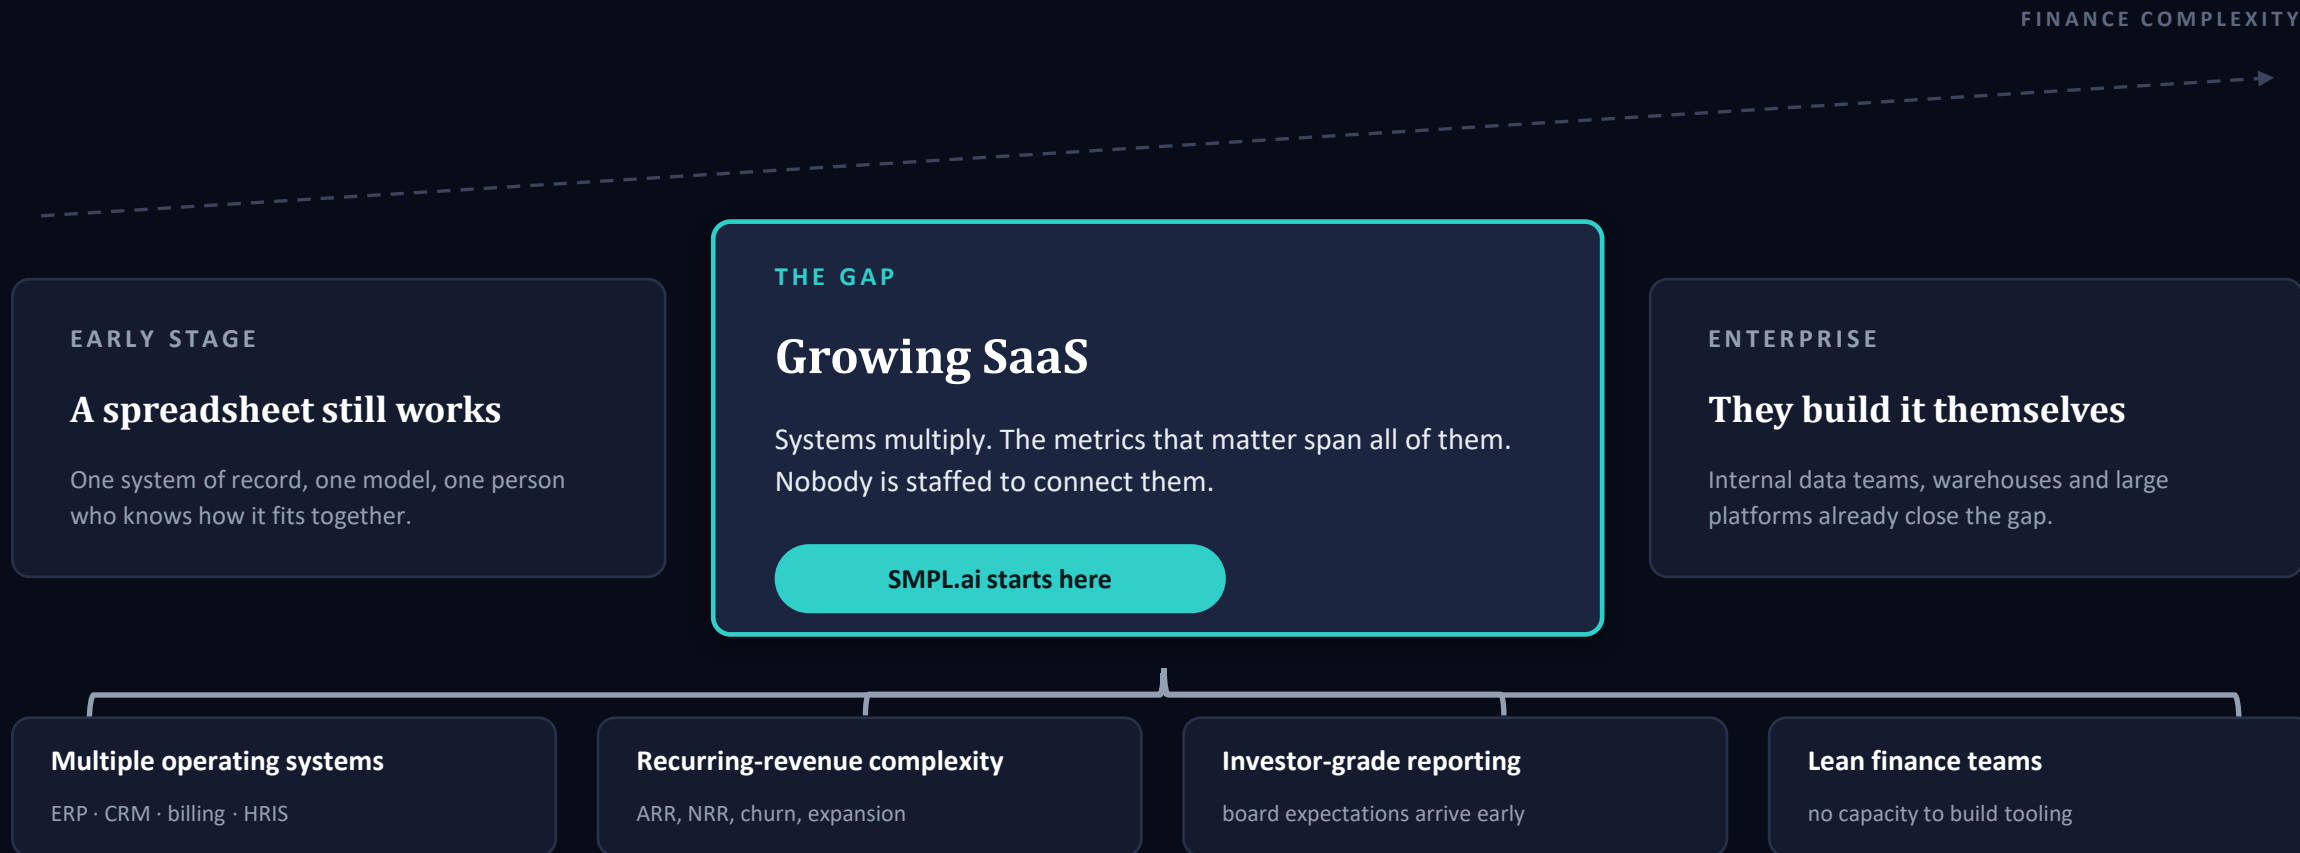

“Who are SMPL.ai’s target customers?”

WHERE WE START

Too complex for spreadsheets. Too small to build the fix.

Growing SaaS companies below roughly \$100M in revenue. Buyer: CFO, VP Finance or FP&A.

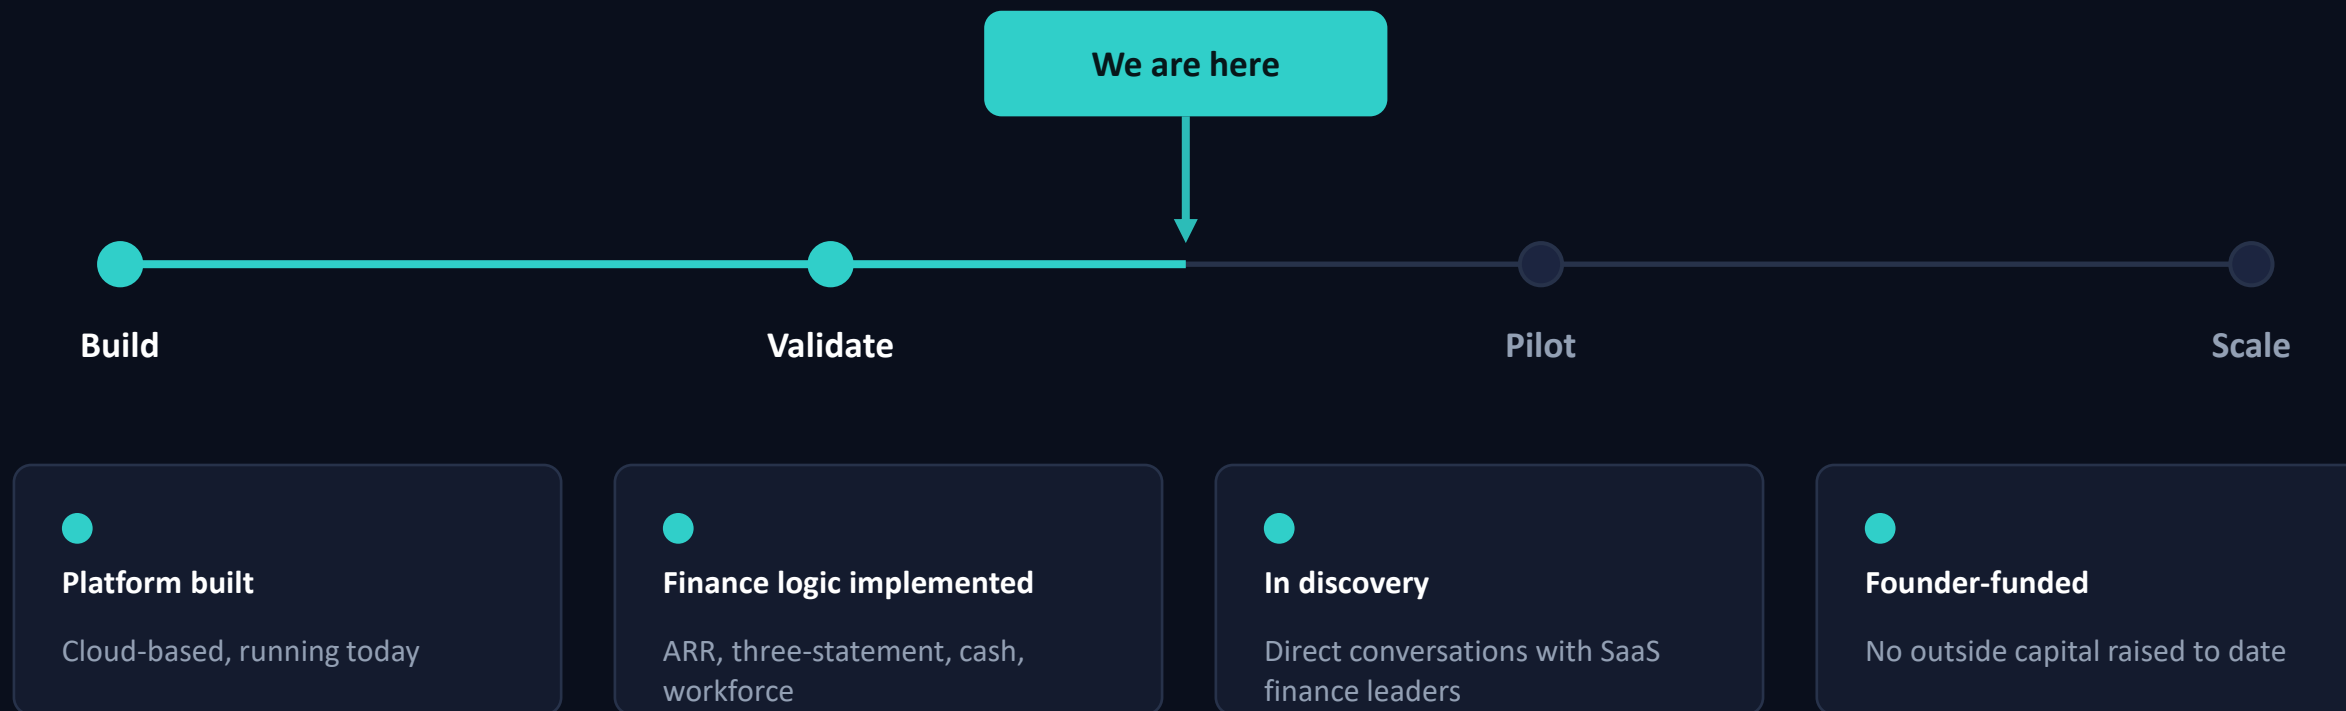

“What’s left before SMPL.ai GTM?”

WHERE WE ARE

Early stage, but much of the product risk is already behind us.

The platform is built, and the core finance logic is working. Now we're validating the market, refining the product with finance leaders, and moving toward our first pilots.

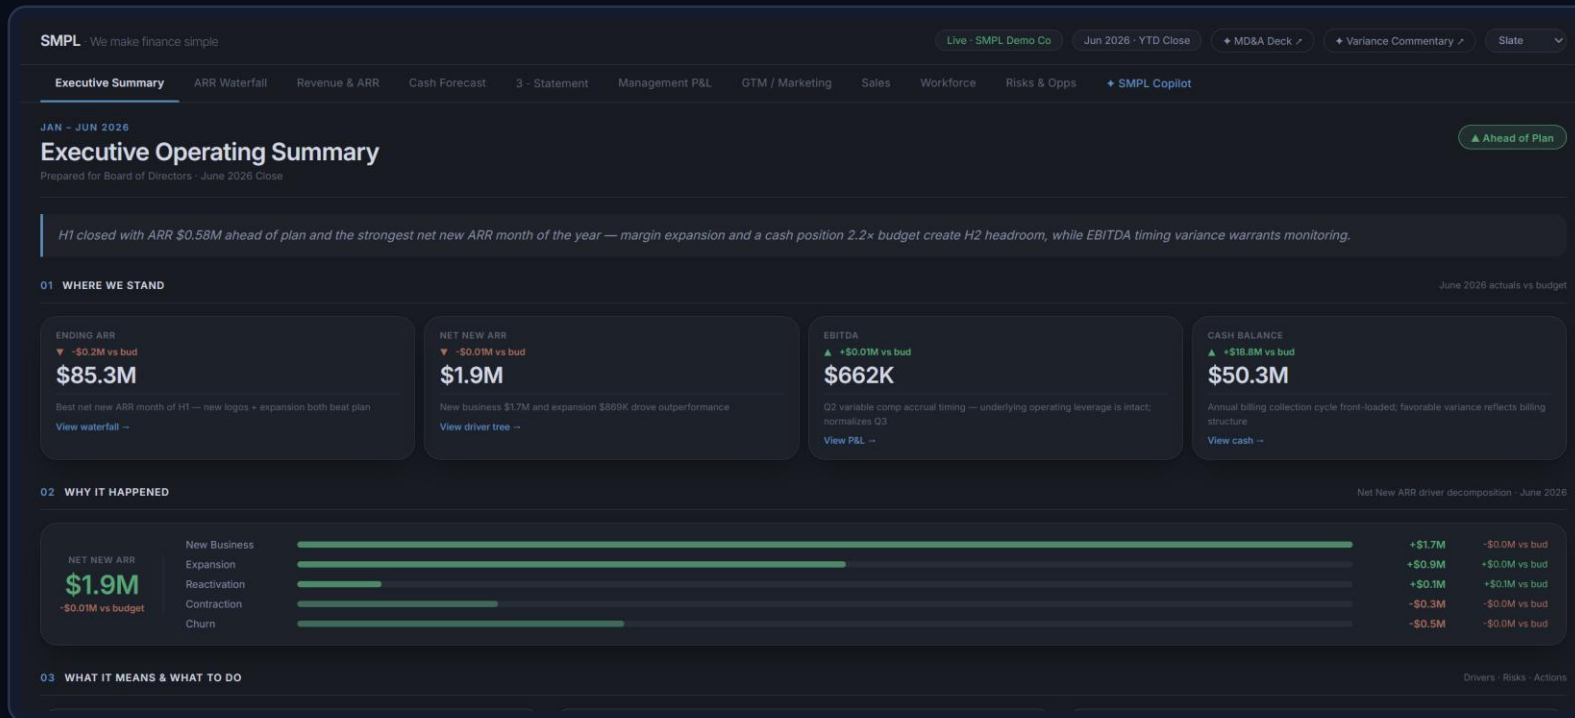

Whatever finance needs.
SMPL.ai powers it.

PRODUCT

Working software, not a concept.

Every growing company operating with the financial intelligence of a world-class CFO organization

Live product. Figures shown are demo data.

- **Management P&L**
actual / budget / forecast with GL drilldown
- **ARR waterfall**
new · expansion · contraction · churn · reactivation
- **Three-statement**
IS, CFS and BS that tie
- **Cash & collections**
annual SaaS billing and cash timing
- **Board pack & MD&A**
variance commentary grounded in the numbers
- **Cross-system lineage**
ERP · CRM · HRIS · billing in one view

“Why you?”

WHY MATT

He was the integration layer, for ten years.

Revenue, contracts, and billings under ASC 606. The full P&L. Management reporting. SaaS metrics. GTM finance. And the systems underneath it all.

TEN YEARS INSIDE THE PROBLEM

Matt Justice

Sole Founder

MBA Finance · BS Accounting · BS Finance
University of Oregon

2 weeks → 2 hours

He automated a recurring reporting cycle across Salesforce, NetSuite, Adaptive and the data warehouse, cutting the reporting timeline by roughly 95%.

Founder experience prior to SMPL.ai. Not a SMPL.ai customer result.

The SMPL.ai vision

VISION

The operating system every SaaS finance team runs on.

Every growing company operating with the financial intelligence of a world-class CFO organization,
without having to build one.
