- HTTPS / TLS
- Multi-tenant Postgres
- Close Freeze Pack

Technical Brief

Application

SMPL.ai is a browser-based SaaS FP&A and revenue intelligence platform. No customer-installed client. Accessed at www.smpl-ai.com for dashboards, close packages, MD&A, and board decks.

Compatibility

Modern evergreen browsers (Chrome, Edge, Safari, Firefox). Desktop-first finance workflows; mobile view supported for executive read-only access.

Authentication

Auth.js email magic-link (Resend). JWT sessions; org membership and plan entitlements. Enterprise SSO (SAML/OIDC) available as a roadmap option — see Technical White Paper.

Data Sources

ERP/GL (NetSuite, Rillet, QuickBooks), CRM (Salesforce, HubSpot), billing (Stripe, Maxio), HRIS (Rippling, Workday), and treasury extracts. Ingest via versioned CSV or white-glove load (Snowflake share, object storage, SFTP).

Backend Platform

Next.js frontend (Vercel) · FastAPI services (Railway) · Neon PostgreSQL multi-tenant warehouse. Numbers are calculated by the Financial Intelligence Engine; AI drafts narrative only.

Close & Analytics

Load → Validate → Lock → Freeze. Certified close-context packs feed MD&A Excel, board PPTX, and Copilot. Deterministic waterfalls, 3-statements, ARR/MRR, and scenario compares (Actual/Budget/Forecast).

AI Narrative

Anthropic Claude (primary) with OpenAI fallback. Keys reside on the API only. Commentary is grounded in engine outputs and freeze packs — not free-form ledger invention.

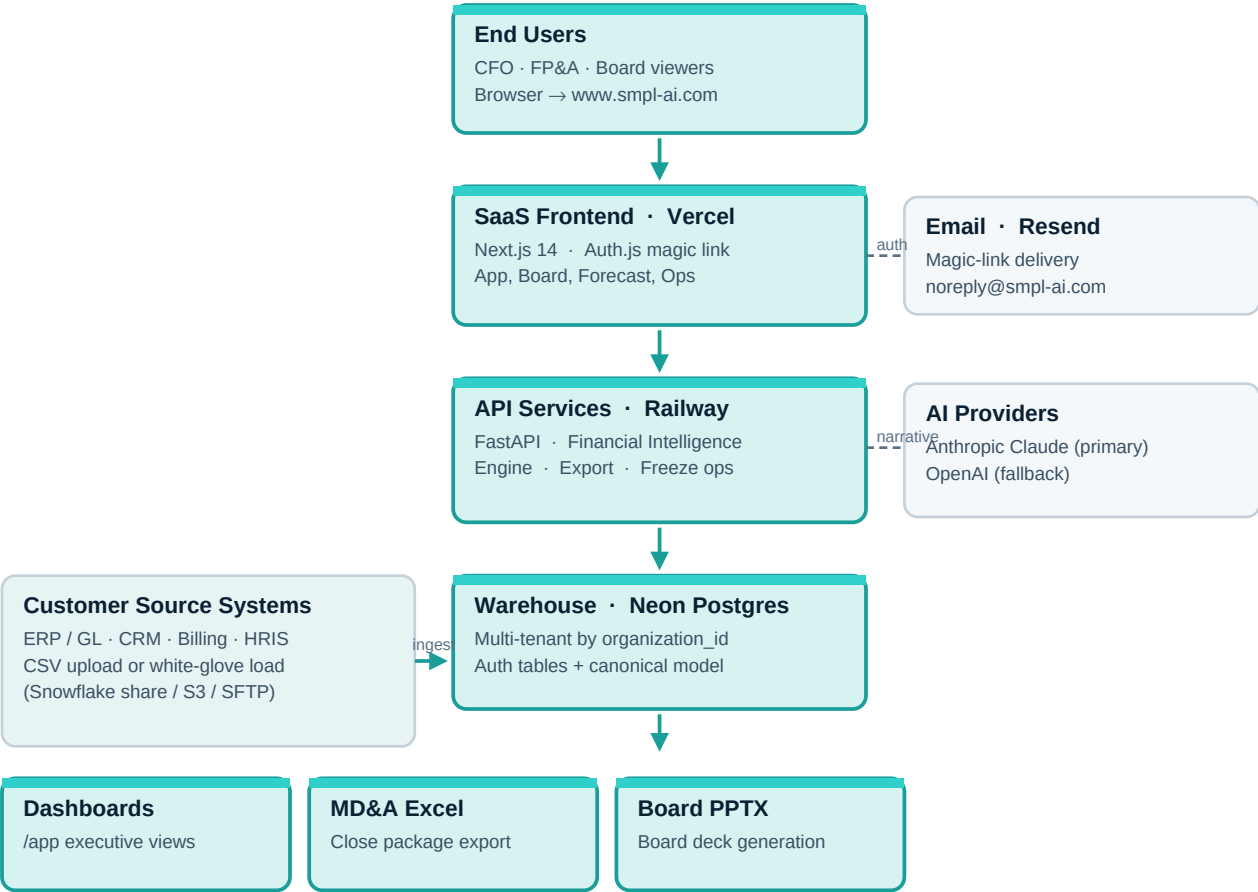

Support & Ops

SMPL Ops console for tenant health, freeze prewarm, and remediation. Monitoring and backup practices documented in the go-live runbooks paired with the Technical White Paper.

Security Posture

TLS in transit; encryption at rest via managed Postgres. Tenant isolation by `organization_id`. CORS allowlist; internal keys for billing/session sync. Platform does not post to customer GL/ERP.
